Western Region

Monday, July 25

- Hot temperatures will continue for many inland areas of the state through the weekend, with moderate to locally high heat risk impacts
  - The hottest temperatures, compared to normal for late July, will be seen across the far northern California inland valleys Monday through Friday, where readings will range from 100 to 110°F and high heat risk impacts are likely
- Scattered monsoon showers and thunderstorms remain possible across the southern mountains and deserts as well as the Sierra into late week
  - Widespread rain is not expected, though a few storms could produce heavy rainfall as well as gusty winds
  - Localized flash flooding could also develop in the vicinity of slower-moving storms, but widespread debris flow or flooding impacts are not expected. Currently, the burn scars of most concern are the El Dorado and Apple.
- Outside of any showers and thunderstorms, fire weather conditions will remain elevated across many inland mountain and foothill locations through the weekend due to ongoing very dry conditions, hot temperatures, and locally breezy winds most afternoons
